

Spoken Pitch Guide: Mr. Netsanet (WZSIT)

Objective: Get technical "guidance," not "permission." Move from "My project" to "Our approach."

1. The Opening (Contextual Discovery)

"Netsanet, while I was working on a small offline system for a local church library, I stumbled upon a serious operational gap that I think is very relevant to our public secondary schools. I wanted to get your technical take on it."

2. The Problem (Framing for WZSIT)

"In most school libraries, books are being borrowed manually. There's no data on loss rates, no audit trail for public assets, and reporting is basically guesswork. It's not that the librarians aren't working—it's just that their current manual tools don't allow for accountability."

3. The Hook (S&T Alignment)

"Without digital tracking, it's hard for the Science & Technology office to show evidence of digital transformation at the school level. It stays invisible to the Bureau of Education."

4. The Technical Response (The "Small" System)

*"To see if this could be fixed, I developed a small, offline-first system. It doesn't need internet to work, so it won't fail during power cuts or network issues. It handles basic inventory and borrower tracking. I've also built it to optionally use **Fayda National ID** as the primary identity key, which standardizes things immediately."*

5. The "Golden" Ask (Co-Authorship)

*"Before I take this any further, I wanted to bring it to you. This touches public systems, so it shouldn't be an 'individual' thing. I'd like your technical guidance on the architecture. If we move forward, I want this to be seen as a solution shaped by **WZSIT technical leadership**, rather than just a personal project."*

6. The Closing

"From your perspective, does this approach to digital accountability make sense for our current local context?"

Founder Tip: Speak slowly. If he interrupts to give advice, **agree with him**.
