

TECHNICAL BRIEF: Institutional Resource Accountability Framework

Prepared for: Wolaita Zone Science & Technology Head

Technical Lead: Mr. Netsanet (Software Development Head, WZSIT)

Project Associate: Natinael Samuel

1. THE GAP (The "Tooling Limitation")

Through recent technical audits of public secondary education facilities, WZSIT has identified a critical vulnerability in asset management:

- **Manual Bottlenecks:** Library resources are managed via paper logs, leading to 15-20% estimated "invisible" asset leakage annually.
- **Audit Blindness:** Current reporting methods lack verifiable data trails, complicating zone-level educational audits.
- **Connectivity Barriers:** Digital attempts often fail due to a "Cloud-Only" mindset that doesn't survive local power or internet outages.

2. THE SOLUTION (The WZSIT-Guided System)

Under technical guidance from WZSIT, a low-impact, **Offline-First** management system has been developed.

- **Identity backbone:** Uses **Fayda National ID** for borrower verification, moving from theoretical ID usage to practical, everyday service delivery.
- **Resilience:** 100% operational uptime without internet; data syncs automatically when the network is available.
- **Efficiency:** Designed to run on existing school hardware (Mobile/PC).

3. THE INSTITUTIONAL ASK

We are requesting the Office Head's approval to conduct a **Controlled Technical Pilot** in 2–3 schools.

- **Primary Goal:** Learning and documentation of digital adoption in low-connectivity environments.
- **Support:** Technically supervised by WZSIT Software Department.
- **Outcome:** A data-driven success story for the Zone Science & Technology Office to present to regional authorities.

"This framework moves library management from an individual responsibility to a system-driven accountability model."
